

How to compile with Ubuntu:

1. Install the allegro library with the repository:

```
sudo apt-get install liballegro4-dev
```

2. Locate the library path and the Include path with the following commands:

```
locate liballeg
```

```
locate allegro.h
```

3. Compile the code with the following commands (from the terminal):

```
g++ namefile.cpp -I/path/to/the/include/folder -L/path/to/the/lib/folder/ -lalleg -o nameProgram
```

or use a IDE, for example Eclipse, please follow the How to compile allegro with eclipse guide (you can it on the website).
